Febri Rizki

UI/UX Designer & AI Engineer

Combining intuitive user interface design expertise with production-grade artificial intelligence engineering. Focused on building impactful end-to-end digital products — from user research to AI model deployment in production.

About Me

I am a UI/UX Designer and AI Engineer with an academic background in Science (M.Sc. from Universitas Sumatera Utara, 2024 & B.Sc. from Universitas Syiah Kuala, 2018) and hands-on experience building end-to-end digital products. I combine user research, interface design, and AI model integration to deliver experiences that are both intuitive and backed by reliable technology. Currently focused on building generative AI-powered platforms, MLOps, and intelligent mobile applications. My approach is always user-centric — every technical decision should serve user needs, not the other way around.

// Core Focus

- UI/UX Design & Design System
- AI Engineering & LLM Integration
- MLOps & Automated Retraining
- Frontend Engineering (Next.js, React)
- Mobile ML (Flutter + TensorFlow Lite)

// Achievements

- 6 active public & private repositories
- Semifinalist, Hackathon PIDI Digdaya BI 2026
- 18 Dicoding Academy certificates
- 1 professional BDT certificate
- Build with Gemini XPRIZE 2026 participant

Tech Stack

Below are the technologies I actively use in building digital products across UI/UX, frontend, AI/ML, and deployment & DevOps. Every project in this portfolio uses a combination of the technologies listed below.

TypeScript

JavaScript

Python

Dart

React

Next.js 16

Tailwind CSS 4

Flutter

TensorFlow Lite

Google Gemini

MLflow

GitHub Actions

PostgreSQL

Prisma ORM

Convex

Docker

Vercel

Cloudflare Pages

Featured Projects

Below are 6 featured projects showcasing the combination of UI/UX Design and AI Engineering expertise — from AI-powered design platforms to automated MLOps pipelines. Each entry is presented like a GitHub repository page with tech stack badges, code snippets, and key metrics.

AI-Powered Design Platform with BranchBoard

A collaborative design platform that integrates generative AI into the UI/UX workflow. BranchBoard allows designers to create parallel design variations with AI-assisted creative exploration — similar to Git branching, but for visual assets.

TypeScript Next.js 16 React 19 Tailwind 4 Prisma Neon Postgres
Gemini API dnd-kit @mdxeditor

- ▶ **BranchBoard:** visual branching system for parallel design exploration with AI-generated variations
- ▶ Drag-and-drop design canvas with dnd-kit for reusable components
- ▶ MDX editor for integrated inline design documentation
- ▶ Serverless Neon Postgres + Prisma for global scale without overhead
- ▶ Generative AI assistant for component & layout alternative suggestions

Adaptive AI Tutor for High-School Students

A personalized adaptive AI tutor for high-school students, built for the **Build with Gemini XPRIZE 2026** hackathon. Uses a Socratic approach to guide students through course material with auto-generated quizzes, smart flashcards, essay review, and a math solver.

Next.js 16 TypeScript Prisma ORM PostgreSQL Gemini 2.0 Flash
Tailwind 4 shadcn/ui Framer Motion Zustand

- ▶ **Adaptive Learning Profile:** onboarding captures grade, target exam, subjects, and daily goal
- ▶ **AI Tutor Chat:** Gemini-powered chat with Socratic approach that adapts to student understanding level
- ▶ **Smart Flashcards:** spaced repetition with SM-2 algorithm for long-term retention
- ▶ **Essay Review:** AI scoring with rubric-based feedback for essay writing
- ▶ **Math Solver:** step-by-step worked solutions for math problems
- ▶ **12 Achievements:** gamification system to keep learning motivation high

```
// Auto-generated quiz by Gemini AI per subject + topic
const response = await gemini.chat.completions.create({
  model: 'gemini-2.0-flash',
  messages: [{ role: 'system', content: socraticPrompt }],
});
```

AI-Powered Cooking Assistant

An AI-powered cooking assistant that helps users discover recipes, calculate nutrition, and get cooking suggestions based on available ingredients. Integrates Convex for real-time backend and Cloudflare Pages for global edge deployment.

● Next.js 16

● TypeScript

● Convex

● Prisma ORM

● Gemini AI

● shadcn/ui

● Tailwind 4

● Cloudflare Pages

● Hook Form

- ▶ **Recipe Generation:** AI generates recipes based on ingredients available in the user's kitchen
- ▶ **Nutrition Tracking:** Gemini AI integration for automatic nutrition analysis
- ▶ **Real-time Sync:** Convex backend for real-time recipe updates across devices
- ▶ **Edge Deployment:** Cloudflare Pages with OpenNext for global performance
- ▶ **Smart Forms:** Hook Form + Zod for valid & structured recipe input

```
// Edge deployment via OpenNext → Cloudflare Pages
scripts: {
  build: 'next build',
  build:cloudflare: 'opennextjs-cloudflare build',
  pages:deploy: 'wrangler pages deploy .open-next/assets'
}
```

Automated ContentRewards Campaign Pipeline

An end-to-end automation system for ContentRewards: campaign scraper, automated video editor, and a social poster to 34 platforms simultaneously. Designed for content creators who want to maximize content distribution without manual intervention.

● Next.js 16

● TypeScript

● Prisma ORM

● Tailwind 4

● shadcn/ui

● dnd-kit

● @mdxeditor

● Playwright MCP

- ▶ **Campaign Scraper:** automatically fetches latest campaign data from ContentRewards
- ▶ **Video Editor:** automated template-based video editing with MDX editor for scripts
- ▶ **34-Platform Social Poster:** distributes content to 34 platforms at once (YouTube, TikTok, Instagram, etc.)
- ▶ **Playwright MCP:** browser automation for posting to platforms without official APIs
- ▶ **Standalone Build:** Next.js standalone output for lightweight Docker deployment

```
// Standalone build + custom server for long-running workers
build: 'next build && cp -r .next/static .next/standalone/.next/',
start: 'NODE_ENV=production bun .next/standalone/server.js'
```

Flutter ML App · 2023 Food Categories

A Flutter app that uses Machine Learning (TensorFlow Lite) to identify food types from photos. Can recognize 2,023 food categories with inference running on a background thread (Isolate) for optimal performance, integrated with MealDB API & Gemini AI for nutrition information.

Flutter

Dart

TensorFlow Lite

Gemini AI

MealDB API

image_cropper

GitHub Actions

- ▶ **2023 Food Categories:** TFLite model can recognize 2,023 food types with high accuracy
- ▶ **Background Thread Inference:** TFLite runs in Isolate to keep UI responsive
- ▶ **Multi-source Intelligence:** MealDB for recipes & ingredients, Gemini AI for nutrition & descriptions
- ▶ **Smart Image Picker:** camera + gallery + image_cropper for optimal results
- ▶ **Clean Architecture:** modular separation of models/services/screens/widgets/utils

```
// Background thread ML inference
Future<FoodPrediction> predict(File image) async {
  return await compute(_runInference, image.path);
  // TFLite via Isolate - no UI freeze
}
```

Automated ML Model Retraining with MLflow + GitHub Actions

An MLOps pipeline that automates the machine learning model retraining process using MLflow Project and GitHub Actions CI. Uses the Breast Cancer Wisconsin dataset as a proof-of-concept, with Docker Hub deployment for environment reproducibility.

Python MLflow GitHub Actions Docker Conda scikit-learn

- ▶ **MLflow Project Spec:** standardized MLproject file for model training reproducibility
- ▶ **CI/CD Pipeline:** GitHub Actions workflow automatically runs `mlflow run MLProject --env-manager=local`
- ▶ **Environment Reproducibility:** `conda.yaml` + Docker image for dependency isolation
- ▶ **Modular Scripts:** separate `modelling.py` for training, `automate_febri.py` for preprocessing
- ▶ **Docker Hub Integration:** image published for deployment to other environments

```
# .github/workflows/workflow_ci.yml
name: ML Retraining CI
on:
  schedule: [{ cron: '0 0 * * 0' }] # weekly
  workflow_dispatch:
jobs:
  retrain:
    runs-on: ubuntu-latest
    steps:
      - run: mlflow run MLProject --env-manager=local
